

Vantaged User Flows

Every flow for the company side, the client side, the admin app and the shared screens, built from the planning decisions. Each screen has an ID (e.g. CO-L01) so you can design and track it.

Rectangle = a screen

Diamond = a decision

Rounded = something the system does (check, email, notification, timer)

Company side

CO-1 · Website: sign-up and the two front doors

CO-2 · Company application and approval

CO-3 · Company login with role selection

CO-4 · Director creates staff logins

CO-5 · Project requests, creating a project and agreeing the plan

CO-6 · Site Manager: a day on site and getting a stage approved

CO-7 · Crew Member: check in, capture proof, finish tasks

CO-8 · Confirming payments

CO-9 · Director: running the company

Client side

CL-1 · Client sign-up: Client Admin or Client Rep

CL-2 · ID check before anything major

CL-3 · Client Admin invites and manages Client Reps

CL-4 · Finding a company and sending a project request

CL-5 · Reviewing and accepting the plan

CL-6 · Reviewing a stage

CL-7 · Paying and recording a payment

CL-8 · Client home, share links and ratings

Admin side

AD-1 · Admin login and dashboard

AD-2 · Approving companies and organisations

AD-3 · Support tickets and account actions

AD-4 · Managing stage templates

Shared screens

SH-1 · Chat

SH-2 · Notifications

SH-3 · Disputes (stage or payment)

SH-4 · Opening a share link

Reference

Screen list for design

The public website does three jobs: show the directory of approved companies, let new people sign up, and send returning people to the right login. **Clients** and **companies** enter through different doors.

Rules

- The public directory is view-only. "Connect" always leads to sign-up; nothing is sent from a public page.
- Returning clients have one login page. The role comes from the account, so there's no picker.
- The "Company login" link is small and away from sign-up, so the public never mistakes it for a way in.

WB-04 Sign up: content

- Two large cards: **I'm a client** (building or overseeing a project) and **I'm a construction company**
- One line under the company card: "Companies are checked and approved by Vantaged before they get access"

A company fills in an application, which creates **no account**. After the admin approves it, the admin creates the **Director's login** (the Director's email plus a generated password) and Vantaged emails the **company login link** with those details. The Director is *not forced* to change the password. They're told it was generated by Vantaged's system, and a change-password prompt sits in their notifications.

Staff reach this page from the **login link** in their SMS or email, or from the small "Company login" link on the website. They pick their role, then enter their details. A login only works for the role(s) the Director gave it.

CO-L01 fields

- **Role** first: Director · Site Manager · Office Coordinator · Crew Member (4 tappable cards)
- Email or phone (+234 default) · password with show/hide
- "Remember my role on this device"

Rules

- The error never says which part was wrong (role or password)
- Wrong-role attempts count toward the lock and appear in the Director's team log
- To switch role: log out, then log in with the other role
- Staff set their own password on first login. The Director is only prompted (CO-2).

Staff can't sign themselves up. Right after approval, the Director adds the **whole team at once** (CO-T04). New hires later are added one at a time (CO-T02). Each login is tied to the role the Director chose.

CO-T04 Add many at once

- Same fields as CO-T02, as table rows, or a CSV/Excel upload with a downloadable template
- Problems shown per row before sending (duplicate phone, missing role)
- Work days per person (for reward check-ins, if rewards are on)

CO-T01 Team list

- Name · role(s) · projects · status (Login sent / Active / Suspended / Removed) · last active
- Actions: edit access, reset password, resend login, suspend, remove
- Activity log: logins, failed and wrong-role attempts, role changes

CO-5 Project requests, creating a project and agreeing the plan

Director, Site Manager, Office Coordinator create · Director or Site Manager send

COMPANY SIDE

Only companies create projects. A project starts from a **client's project request**, or the company creates it directly and invites its own client (or runs it with no client connected).

CO-6 Site Manager: a day on site and getting a stage approved

Site Manager (Director can do the same)

COMPANY SIDE

The crew app is basically one screen with a big camera button. Everything works without signal and uploads later with the original time and place. Crew use the **team chat only**, never the client chat.

Gallery photos: allowed, but labelled "Not captured in app" and they don't count toward minimum proof. Show that label in CO-C04 and on the stage page.

Disputes, from either side, follow the shared dispute flow (SH-3).

Individual Client Admins sign up and start at once, with no approval and no ID check yet. Organisations (governments, companies) apply and wait for approval, like construction companies. **Client Reps can only join with a link code** from their Client Admin, so no Rep can exist without an Admin.

Allowed before the ID check

- Browse Find companies, view profiles and ratings
- Open share links they've been sent
- Set up their profile

Needs the ID check

- Sending or accepting project requests and invites
- Accepting plans, approving stages, recording payments
- Rating, and chatting with companies

Still to decide: whether Client Reps must pass their own ID check before approving stages or recording payments.

One button sends the invite. It was designed for clients who aren't technical.

Rep permissions (chosen per rep)

View progress · approve/reject stages · record payments · suggest changes · message the company · manage share links · invite people. **Accepting the plan and change requests is Client Admin only**, whatever a Rep's permissions. Reps can view and comment.

CL-4 Finding a company and sending a project request

Client Admin (ID-verified to send)

CLIENT SIDE

Clients never create projects. They send a short **project request** (a brief), and the company creates the project. A client can have **up to 3 open requests** for the same job. In v1 each project has **one company**.

Money never goes through Vantaged in v1. The client pays by normal bank transfer, and Vantaged keeps the record.

Both companies and organisation clients come through the same approval queue. Neither has an account until it's approved.

Chat privacy: the admin can only read a chat if a user reports it or attaches it to a ticket or dispute.

Chat photos never count as stage proof. Proof only comes from the camera inside a stage, with its time and GPS stamp.

In v1 the two sides settle disputes themselves. Vantaged records everything and shows unresolved disputes publicly.
