

BuildTrack

Product Requirements Document

A trust-first construction tracking platform that lets clients see, verify and pay for construction progress remotely — and gives contractors one system to run their projects, crews and client relationships.

Document	Product Requirements Document (PRD)
Product	BuildTrack (working name — final name to be decided)
Version	1.0 — Draft for review
Date	27 September 2026
Product owner	Izuchukwu
Status	Draft — covers releases v1.0, v1.1, v2 and later
Next document	Software Requirements Document (SRD)

Version history

Version	Date	Author	Changes
1.0 (draft)	27 Sep 2026	Izuchukwu	First complete PRD, consolidating all decisions from the ideation phase and competitor research.

How to read this document

- **Sections 1–4** explain the why: the problem, the opportunity, goals and the people BuildTrack serves.
- **Sections 5–6** define who can do what (roles, permissions and dashboards).
- **Section 7** is the core: every functional requirement, grouped by feature area. Each requirement has an ID (e.g. [FR-PAY-03](#)) and a target release.
- **Section 8** shows the key lifecycles (project, stage, payment, dispute) as states and flows.
- **Sections 9–14** cover the business model, non-functional requirements, integrations, release plan, risks and open items.
- **Appendices** hold reference material such as a worked stage preset.

Release labels

Every requirement is tagged with the release it belongs to:

Label	Meaning
v1.0	First public launch. The core trust loop: verification, projects, stages, proof, approvals, recorded payments, disputes, chat, notifications, ratings, rewards, billing.
v1.1	Shortly after launch: pause / cancel / switch contractor, expenses and materials log.
v2	Next major release: pay through the app, platform-resolved disputes, paid organisation plan, multiple contractors per project, extra roles.
Later	Future roadmap: escrow, independent inspections, camera/drone integrations, AI proof checks.

Requirement priority

Within a release, requirements use MoSCoW priority: **Must** (release cannot ship without it), **Should** (important, can slip to a point release if needed), **Could** (nice to have).

1 Introduction

1.1 Purpose of this document

This PRD defines **what** BuildTrack must do and **why**. It is the single source of truth for scope, user roles, behaviour and business rules agreed during the ideation phase. It deliberately avoids implementation detail (architecture, database design, APIs, technology choices); those belong in the Software Requirements Document (SRD) that follows.

1.2 Product summary

BuildTrack is a two-sided construction tracking platform connecting the people who **pay for** a build (Clients) with the company that **builds** it (the Contractor).

- **Contractors** run their projects in BuildTrack: they set up each project from a stage preset, agree the plan and payment structure with the client, assign their crew, and post progress with photo, video and GPS-stamped proof.
- **Clients** — individuals (including Nigerians in the diaspora), governments and organisations — follow their build remotely, approve or reject each stage based on evidence, record payments, and rate the contractor.
- **Verified progress** is the core idea: a stage only counts as complete once the client has approved it against the proof. Everything else — payments, disputes, ratings, rewards — builds on that record.

BuildTrack is the first standalone app under the **All Tracker** umbrella brand. All Tracker is a family of separate, vertical-specific tracking apps (similar to how Adobe has multiple distinct apps under one brand); SPANR (car repair tracking) is a sibling app.

1.3 Scope

In scope (this PRD)

- Client and Contractor web apps and mobile apps
- Contractor verification and client identity checks
- Contractor directory and invitations
- Projects, stage presets, plans and change requests
- Progress proof, stage review, verified progress
- Recorded (off-app) payments, disputes, bank-detail protection
- Built-in chat, notifications, ratings
- Crew tasks, site check-ins and the worker reward system
- Contractor subscriptions and the Platform Admin dashboard
- Roadmap items for v1.1, v2 and later

Out of scope (for now)

- Moving money through the app (planned for v2)
- Escrow (later, via a licensed partner)
- Actual subscription prices (to be set in the business phase)
- Final product name (working name BuildTrack)
- Estimating, bidding, full accounting, payroll
- BIM / 3D models, drones, fixed cameras (later)
- Technical design — covered by the SRD

1.4 Glossary

Term	Meaning in BuildTrack
Client	The side paying for the build. An account is either <i>Individual</i> (one person) or <i>Organisation</i> (government, corporate, developer).
Client Admin	The person in full control of a client account.
Client Rep	Client Representative. Oversees builds on the Client Admin's behalf, with abilities granted through permission modules.
Contractor	The verified construction company carrying out the build.
Director	The head of a contractor account (the company's owner / MD).
Site Manager	Runs work on site; posts progress and submits stages for review.
Office Coordinator	Office-based staff: documents, client communication, payment records, progress uploads.
Crew Member	Site worker with their own login who sees only the projects they are assigned to.
Platform Admin	BuildTrack's own team (BuildTrack Support): verification, support, subscriptions, presets.

Term	Meaning in BuildTrack
Project	One construction job between one contractor and one client (v1).
Stage	A defined phase of a project (e.g. Foundation, Roofing) with a checklist, proof requirements, target dates, a weight and optionally a payment.
Stage preset	A reusable template of stages for a project type (e.g. Duplex, Road, Bridge).
Plan	The project's stages plus its payment structure, proposed by the contractor and accepted (locked) by the client.
Proof	Photos, videos and descriptions attached to checklist items and stages, stamped with GPS location and time.
Verified progress	Percentage complete calculated only from stages the client has approved.
Reported progress	The contractor's own estimate of progress, shown separately from verified progress.
Ball in court	Whose turn it is to act on an item (borrowed from Procore). Shown on every stage, payment, change request and dispute.
Change request	A formal request to change a locked plan (stages, dates, amounts); the other side must approve it.
Issue	A problem to fix, created from a rejected checklist item.
Recorded payment	A payment made outside the app (bank transfer) and recorded in BuildTrack with a receipt and transaction reference.
Retention	A percentage withheld from payments and released at handover.
Share link	A read-only link to view a project without an account.
CAC / TIN / NIN	Corporate Affairs Commission registration / Tax Identification Number / National Identification Number (Nigeria).
COREN / CORBON	Council for the Regulation of Engineering in Nigeria / Council of Registered Builders of Nigeria.

1.5 References

- *Construction Tracking Competitor Research* (Procore, OpenSpace, Track3D, TrueLook) — produced during ideation.
- Industry practice consulted during ideation: Procore project setup, inspections, schedule and notification behaviour; milestone, progress and retention payment practice; Buildertrend open-book vs fixed-price client visibility; Nigerian contractor compliance (CAC, TIN, COREN, CORBON, BPP).

2 Problem & opportunity

2.1 Problem statement

People funding construction in Nigeria — especially from abroad — cannot see or verify what is happening on site, and the tools they rely on today do not create trust.

- **No verified view of progress.** Clients depend on occasional photos and the contractor's word. Stories of stalled or abandoned builds ("stuck at lintel level") and misused funds are common, which makes diaspora clients hesitant to build at home.
- **WhatsApp is the system of record.** Updates, approvals and payment proof live in chats that get deleted, lost with phones, or leave with staff. Nothing is structured, dated to a stage or usable in a dispute.
- **Money is not tied to proof.** Payments are made on trust; there is no shared record of what was paid, against which stage, and whether it was received.
- **Honest contractors cannot prove they are honest.** Good builders have no portable reputation or verified track record to win clients, especially remote ones.
- **Existing software does not fit.** Global tools are built and priced for large US/European contractors, treat the client as a guest, and are not designed for Nigeria.

2.2 Market context

Competitor research (see References) found two groups: **systems of record** that run the contractor's project (Procore) and **"eyes on site"** tools that turn imagery into progress (OpenSpace, Track3D, TrueLook).

Competitor	What it does	What BuildTrack borrows	Gap BuildTrack fills
Procore	All-in-one construction management for large contractors; unlimited users; priced on annual construction volume.	Company → projects → tools structure; role/permission templates; tracked items with status and "ball in court"; unlimited users.	Expensive, complex, built for big firms; client historically a guest; progress reported, not verified; no Africa focus.
OpenSpace	360° site capture mapped to floor plans; verified progress; field issues.	Proof pinned to location and date; before/after comparison; low-effort capture (voice, walk-and-talk).	Enterprise pricing; needs someone to walk the site; no owner-first experience.
Track3D	AI progress measurement from any capture; live in a day, no BIM needed.	Progress measured by stage/quantity; fast setup without complex models.	Narrow product; no workflow, payments or client side.
TrueLook	Fixed jobsite cameras: live view, time-lapse, security.	Easy sharing with non-users (share links); simple, transparent pricing.	Sees only one view; no progress verification or workflow.

Local players (e.g. BuildWatch, Buildove, Pencil Home, Propy Mould, Buildam) confirm demand — many are services or early apps — while most clients still rely on WhatsApp photos.

2.3 Value proposition & differentiators

Differentiator	Why it matters
Client-first, two-sided design	The client has a real dashboard and real authority (approvals), not a guest view.
Verified progress	Only client-approved stages count toward % complete; reported progress is shown separately.
Evidence you can trust	GPS- and time-stamped photos/videos against a stage checklist, with minimum proof before review.
Payments tied to proof	Stage approval makes its payment due; receipts, confirmations and disputes are recorded with deadlines.
Verified contractors only	CAC, TIN, director identity and bank-name checks before a contractor can use the app.
Two-way reputation	Clients rate contractors and contractors rate clients; unresolved disputes appear on both profiles; NIN/passport checks stop clients escaping bad reviews.
Replaces WhatsApp for project work	Built-in chat keeps every conversation with the project, even when staff leave.
Built for Nigeria	Android-friendly, offline capture, naira by default, Nigerian verification (CAC/TIN/NIN), local stage presets (DPC, lintel, decking).
Motivated crews	Optional reward points turn good, verified work into higher pay.

3 Goals, non-goals & success metrics

3.1 Product goals

1. **Trust:** give clients a verified, evidence-based view of progress and payments on every project.
2. **Adoption by contractors:** make BuildTrack the easiest way for a Nigerian contractor to run projects and win clients (especially diaspora clients).
3. **Replace informal channels:** move project communication, approvals and payment records out of WhatsApp and notebooks into a structured record.
4. **Fair accountability both ways:** make it visible when either side behaves badly (unconfirmed payments, repeated rejections, unresolved disputes).
5. **Sustainable business:** generate recurring revenue from contractor subscriptions while keeping individual clients free.

3.2 Non-goals

- Not a payment processor or escrow provider in v1 — money moves outside the app.
- Not a platform-run dispute court in v1 — parties resolve disputes themselves (the platform steps in from v2).

- Not an enterprise tool competing with Procore on estimating, BIM, accounting or scheduling depth.
- Not a hiring marketplace for individual artisans.

3.3 Success metrics

Targets are to be set once launch plans and pricing are finalised; the metrics below define *what* will be measured.

Area	Metric	Why
Contractor growth	Verified contractors; active projects; free-to-paid conversion after first project	Main revenue driver
Client connection	% of projects with a connected client; client invites sent by contractors and vice versa	Connected clients unlock verified progress
Verification loop	Median time from "Ready for review" to decision; % of stages approved first time; % of reviews overdue	Health of the core trust loop
Payments	% of receipts confirmed within 3 days; % disputed; % unresolved after 14 days	Trust in payment records
Engagement	Proof uploads per stage; weekly active users by role; chat messages per project	Real use vs. dormant accounts
Reputation	% of completed projects rated (both directions); average ratings	Two-way trust signal
Retention	Contractor subscription retention; repeat projects per client	Sustainable business

4 Users & personas

4.1 Account types

Account type	Who	Key facts
Client — Individual	A person funding their own build, including diaspora Nigerians.	Always free. Identity checked by NIN or international passport. Client Admin can add Client Reps (e.g. a relative on the ground).
Client — Organisation	Governments, ministries, corporates and developers managing one or many builds.	Free under Early Access in v1 (limited active projects); paid plan in v2. Multiple Client Reps.
Contractor	A verified construction company.	Pays a subscription (first project free). Fixed roles: Director, Site Manager, Office Coordinator, Crew Member. Unlimited users.
Platform	BuildTrack's own team.	Platform Admin dashboard: verification, support, dispute monitoring, subscriptions, presets.

4.2 Personas

Persona	Needs	Pain points today
Ada — diaspora homeowner Client Admin, lives in the UK, building a duplex in Enugu	See real progress without flying home; pay only for work done; a trusted person locally to check things.	Relies on WhatsApp photos she can't verify; fears money disappearing; no record if things go wrong.
Emeka — Ada's brother Client Rep	Visit site occasionally, approve stages on Ada's behalf, raise issues.	No authority or structure; decisions lost in family chats.
Ministry of Works project desk Organisation client	Track several contractors across roads and buildings; evidence for audits; several Client Reps overseeing different sites.	Paper reports; slow verification; weak audit trail.
Tunde — contractor Director Runs a 25-person building firm	See all projects and money in one place; win diaspora clients; motivate staff.	Juggles WhatsApp groups and notebooks; payment arguments; no way to prove track record.
Bola — Site Manager	Post progress quickly from site, get stages approved, keep crew on task.	Poor network on site; repeated questions from clients; unclear approvals.
Chinedu — Office Coordinator	Keep documents, client messages and payment records in order.	Receipts and approvals scattered across phones and emails.
Musa — Crew Member Basic Android phone	Know today's tasks, submit proof with a few taps, get rewarded for good work.	Complex apps, weak data connection, effort goes unrecognised.

5 Roles & permissions

BuildTrack has two sides — **Client** and **Contractor** — plus BuildTrack's own **Platform Admin** team. There is no separate "viewer" role or dashboard: read-only access is given through **share links**.

5.1 Role overview

Side	Role	Description	Access to projects
Client	Client Admin	Full control of the client account. Creates and manages Client Reps, accepts plans, approves stages, records payments, rates contractors.	All of the client's projects
	Client Rep	Oversees builds on the Client Admin's behalf. Abilities come only from the permission modules the Client Admin grants. A Client Rep with all modules is effectively an admin.	Projects the Client Admin assigns
Contractor	Director	Head of the company. Company profile, verification, subscription, bank details, staff, all projects and money.	All company projects
	Site Manager	Runs work on site: assigns crew and tasks, posts progress, submits stages for review, fixes issues.	All company projects
	Office Coordinator	Office duties: documents, client communication, payment records and confirmations, progress uploads.	All company projects
	Crew Member	Site worker with their own login. Sees today's tasks, submits proof, checks in on site. Can share a <i>viewer link</i> with a fellow crew member not on the project when they need help.	Only assigned projects
Platform	Platform Admin	BuildTrack Support: contractor verification, user support, dispute monitoring, subscriptions, stage presets.	Administrative access (audited)

Fixed roles

Contractor roles are **fixed**: a Director cannot create custom roles or change what each role can do. Client Rep abilities are the only configurable permissions in the product, and they are set by the Client Admin.

5.2 Client Rep permission modules

The Client Admin can create **as many Client Rep accounts as needed** and switch each module on or off per Client Rep. A Client Rep with every module switched on can do everything a Client Admin can do on those projects, except the account-level actions reserved for the Client Admin (identity verification, deleting the account, creating Client Reps unless granted "Invite people").

Module	What it allows
View progress	See the project dashboard, stages, proof, timeline and verified/reported progress.
Approve / reject stages	Review stages marked "Ready for review", approve them, or reject them with reasons (creating issues).
Payments	See payments due and the contractor's account details, upload receipts, withdraw receipts, take part in payment disputes.
Change requests	Raise change requests and approve or reject the contractor's change requests.
Message the contractor	Use project chat with the contractor's team.
Manage share links	Create and revoke read-only share links (e.g. for family, a lender or auditors).
Invite people	Invite a contractor to a project and add further Client Reps.

5.3 Permission matrix

Defaults below apply to v1.0. ✓ = allowed; **M** = allowed if the Client Rep has the named module; — = not allowed.

Action	Client Admin	Client Rep	Director	Site Mgr	Office Coord.	Crew
Account & company						
Manage client account, identity check, Client Reps	✓	M (invite)	—	—	—	—
Company profile, verification, subscription	—	—	✓	—	—	—
Add / change company bank details	—	—	✓	—	—	—
Invite / remove staff	—	—	✓	Crew only	—	—
Projects & plans						
Browse contractor directory, invite a contractor	✓	M (invite)	—	—	—	—
Create / edit draft project and plan	—	—	✓	✓	✓	—
Send plan to client; invite client	—	—	✓	✓	—	—
Accept plan (locks it) or request changes	✓	—	—	—	—	—
Raise / approve change requests	✓	M	✓	✓	—	—
Manage company stage presets & default payment structure	—	—	✓	✓	—	—
Progress & review						
View project progress	✓	M	✓	✓	✓	Assigned
Upload progress updates & proof	—	—	✓	✓	✓	Assigned
Assign crew and tasks	—	—	✓	✓	—	—
Mark stage "Ready for review"; resubmit	—	—	✓	✓	—	—

Action	Client Admin	Client Rep	Director	Site Mgr	Office Coord.	Crew
Approve / reject stages	✓	M	—	—	—	—
Money						
See payments due & contractor account; upload / withdraw receipt	✓	M	—	—	—	—
Confirm or dispute a receipt	—	—	✓	—	✓	—
Raise / resolve disputes	✓	M	✓	✓ (stage)	✓ (payment)	—
Communication, sharing & reputation						
Chat with the other side	✓	M	✓	✓	✓	—
Internal staff chat	—	—	✓	✓	✓	✓
Create / revoke project share links	✓	M	✓	✓	✓	—
Share a crew viewer link	—	—	—	—	—	✓
Rate the other side	✓	—	✓	—	—	—
Rewards (if enabled by the contractor)						
Configure rewards; mark bonuses paid	—	—	✓	—	—	—
Give recognition points	—	—	Anyone	Crew only	—	—
Earn points; see own points	—	—	—	✓	✓	✓

Where the ideation phase did not specify which contractor role performs an action, this matrix sets a proposed default; it is listed for confirmation in Section 14.

6 Product structure & dashboards

6.1 Structure

The **project** is the centre of the model. A contractor has many projects; a client has many projects; each project in v1 links exactly one contractor to one client.

- A contractor only ever sees projects it is linked to. A client sees all its projects across all contractors in one list.
- Both web and mobile apps are available to **both sides**.
- Each role lands on its own dashboard after login.

6.2 Dashboards by role

Dashboard	Shows
Client Admin	All projects across all contractors: contractor, current stage, verified % and reported %, last update, money paid vs remaining, items waiting for them (ball in court), open issues, disputes. Client Reps and their modules. Contractor directory. Latest proof photos.
Client Rep	The same project view, limited to assigned projects and granted modules, with a "waiting for you" list.
Director	All company projects across all clients; stages awaiting review; payments due, unconfirmed or disputed; overdue items; staff and crew assignments; ratings; subscription status; reward overview.
Site Manager	Projects with today's work, crew assignments and tasks, stages in progress / ready / rejected, issues to fix, recent check-ins.
Office Coordinator	Receipts awaiting confirmation (with the 3-day deadline), documents, client messages, payment schedule per project.
Crew Member	Deliberately simple, one screen: today's tasks , a big camera button to submit proof (photo, video, voice), site check-in, and their points. Works offline.
Platform Admin	Verification queue, flagged accounts, unconfirmed payments and unresolved disputes (monitoring), support tickets, subscriptions, stage preset library.

7 Functional requirements

This section lists every functional requirement, grouped by feature area. Each requirement has a unique ID, a MoSCoW priority and a target release.

Section	Feature area	Release(s)
7.1	Accounts & onboarding	v1.0
7.2	Contractor verification	v1.0
7.3	Client identity verification	v1.0
7.4	Contractor directory & invitations	v1.0
7.5	Project creation	v1.0 v2
7.6	Stage presets	v1.0
7.7	Plan, payment structure, acceptance & lock	v1.0 v2
7.8	Change requests	v1.0
7.9	Progress updates & proof	v1.0
7.10	Tasks & site check-ins	v1.0
7.11	Stage review: approval, rejection & overdue reviews	v1.0
7.12	Progress calculation	v1.0
7.13	Payments (recorded, not processed)	v1.0 v2 Later
7.14	Payment protection & bank-detail lock	v1.0
7.15	Disputes (payment and stage)	v1.0 v2
7.16	Projects without a connected client	v1.0
7.17	Chat	v1.0
7.18	Notifications	v1.0
7.19	Ratings & reputation	v1.0 v1.1
7.20	Share links	v1.0
7.21	Worker reward system	v1.0
7.22	Subscriptions & billing	v1.0 v2 Later
7.23	Platform Admin dashboard	v1.0 v2
7.24	Pause, cancel & switch contractor	v1.1
7.25	Expenses & materials log	v1.1

7.1 Accounts & onboarding

Everyone signs up with a phone number and email. The sign-up path depends on the side and account type.

ID	Requirement	Priority	Release
FR-ACC-01	Users can sign up as a Client (Individual or Organisation) or a Contractor . The account type is chosen at sign-up.	Must	v1.0
FR-ACC-02	Phone number and email are verified by one-time code (OTP) before the account becomes usable.	Must	v1.0
FR-ACC-03	A Client Admin can create an unlimited number of Client Rep accounts, assign them to projects, and switch permission modules on or off per Client Rep (see 5.2).	Must	v1.0
FR-ACC-04	A Director can invite staff by phone or email and assign one fixed role: Site Manager, Office Coordinator or Crew Member. Site Managers can invite Crew Members.	Must	v1.0
FR-ACC-05	Every Crew Member has their own login. Crew Members see only projects they are assigned to.	Must	v1.0
FR-ACC-06	Removing a staff member or Client Rep revokes access immediately; everything they posted stays on the project record.	Must	v1.0
FR-ACC-07	Login on a new device requires an SMS one-time code.	Must	v1.0
FR-ACC-08	Users can manage their notification preferences (see 7.18).	Must	v1.0

7.2 Contractor verification

Only verified contractors can use BuildTrack. A contractor can sign up and complete its profile, but cannot create live projects, appear in the directory or receive client invitations until the Platform Admin team approves verification. Checks are automated where a provider API exists (CAC, TIN, identity, bank account name) and reviewed by the Platform Admin team.

ID	Requirement	Priority	Release
FR-VER-01	Contractors submit the required verification items in the table below. Verification status is one of: Not started, Submitted, Under review, Verified, Rejected (with reason), Expired.	Must	v1.0
FR-VER-02	CAC registration is checked automatically against the registry: registered name, RC number, incorporation date and status. Status must be Active .	Must	v1.0
FR-VER-03	The company bank account's name (resolved automatically from the account number) must match the verified CAC name.	Must	v1.0
FR-VER-04	Optional badges are shown on the contractor's profile once checked: Registered Builder / Engineer (COREN / CORBON), Government-ready (BPP / Ministry of Works category), Tax clearance, Insured, Portfolio.	Should	v1.0
FR-VER-05	For road and bridge projects (engineering work), a verified COREN registration is required before the contractor can create such a project.	Must	v1.0

ID	Requirement	Priority	Release
FR-VER-06	Verification is renewed every 12 months , and immediately whenever the bank details or directors change. Contractors are reminded before expiry.	Must	v1.0
FR-VER-07	Contractors invited by a client but not yet on BuildTrack sign up through the invite link; the invitation waits until they are verified.	Must	v1.0

Verification checklist

Type	Check	How it is verified
Required (to become Verified)	CAC certificate + RC number, status Active	Registry lookup via verification provider + document upload
	TIN (Tax Identification Number)	Registry lookup via verification provider
	Director identity: NIN or international passport + selfie	Identity provider (e.g. Smile ID, Prembly, Dojah) with liveness check
	Company bank account name matches the CAC name	Account-name lookup (e.g. Paystack / Flutterwave)
	Office address + proof (e.g. utility bill)	Upload, reviewed by Platform Admin
	Phone number and email	One-time code
Optional badges	COREN / CORBON registration	Upload + COREN public verification portal → "Registered Builder / Engineer" badge. <i>Required for roads and bridges.</i>
	BPP registration / Ministry of Works contractor category	Upload → "Government-ready" badge
	Tax clearance certificate	Upload
	Insurance	Upload
	Portfolio of past projects	Photos + descriptions

Why professional registration is optional

Many genuine small builders are not registered with COREN or CORBON. Making it mandatory would exclude much of the market; showing it as a badge lets clients prefer registered contractors. The exception is road and bridge work, which is engineering work by law.

7.3 Client identity verification

Clients verify their identity so they cannot open a new account to escape bad ratings or unresolved disputes on an existing one.

ID	Requirement	Priority	Release
FR-IDV-01	Client Admins verify identity with NIN , or an international passport for clients without a NIN (e.g. diaspora).	Must	v1.0

ID	Requirement	Priority	Release
FR-IDV-02	One verified identity can hold only one Client Admin account.	Must	v1.0
FR-IDV-03	BuildTrack stores only the verification result (verified yes/no, provider reference, date) — not the raw NIN or passport number — in line with Nigeria's data protection law.	Must	v1.0
FR-IDV-04	Individual client accounts are always free .	Must	v1.0

7.4 Contractor directory & invitations

Clients can find and invite a verified contractor, or bring in their own contractor who is not yet on BuildTrack. Because the directory is public-facing, only verified contractors are listed.

ID	Requirement	Priority	Release
FR-DIR-01	Clients can browse and search a directory of verified contractors by location, project types built, badges and rating.	Must	v1.0
FR-DIR-02	Each contractor profile shows: company name, location, project types, verification badges, number of projects completed on BuildTrack, average rating and reviews, and any Unresolved dispute flags.	Must	v1.0
FR-DIR-03	A client can invite a listed contractor to build their project. The contractor accepts or declines, then creates the project and sends the plan.	Must	v1.0
FR-DIR-04	A client can invite a contractor that is not on BuildTrack by name, email or phone. The contractor receives a sign-up link that automatically connects them to that client once verified.	Must	v1.0
FR-DIR-05	A contractor can invite a client by email or phone to connect to a project it has created.	Must	v1.0

7.5 Project creation

The contractor creates every project (the client does not). Setup is kept short: a handful of fields, then a stage preset does the heavy lifting.

ID	Requirement	Priority	Release
FR-PRJ-01	Project fields: name, project type (from the preset list), location pin on a map + address, contract value, currency, start date, target completion date, description. Contract type (Fixed price / Open book) is added in v1.1.	Must	v1.0
FR-PRJ-02	Currency is chosen per project: Naira (default), USD or GBP . It is a display label only; there is no currency conversion because money does not move through the app.	Must	v1.0
FR-PRJ-03	The contractor selects a stage preset for the project type (see 7.6) and edits it into the project's plan.	Must	v1.0
FR-PRJ-04	In v1 each project has exactly one contractor and one client . An organisation with several contractors has one project per contractor.	Must	v1.0

ID	Requirement	Priority	Release
FR-PRJ-05	Project status: Draft → Awaiting client acceptance → Active → Completed. Plus Client not connected (see 7.16), and Paused / Cancelled in v1.1.	Must	v1.0
FR-PRJ-06	Completed projects become read-only and remain viewable by both sides indefinitely; nothing is deleted.	Must	v1.0
FR-PRJ-07	Multiple contractors per project, each with an assigned scope (e.g. structure, electrical).	Could	v2

7.6 Stage presets

Instead of asking contractors for a professional schedule file (as Procore does), BuildTrack ships ready-made stage presets for **every project type, including roads and bridges**. Presets work in three layers:

ID	Requirement	Priority	Release
FR-PRE-01	BuildTrack provides platform presets for all common project types, including at least: Bungalow, Duplex, Storey building, Commercial building, Renovation, Road, Bridge. Platform Admins maintain the library.	Must	v1.0
FR-PRE-02	Each preset defines, per stage: name, order, default weight (% of the whole project), a short checklist , and minimum proof required before review (e.g. at least 5 photos and 1 video).	Must	v1.0
FR-PRE-03	Contractors can copy a platform preset, edit it (add, remove, rename, reorder stages, change weights, checklists and proof rules) and save it as a company preset (e.g. "Our standard duplex").	Must	v1.0
FR-PRE-04	A company preset can also store the contractor's default payment structure (see 7.7).	Should	v1.0
FR-PRE-05	When a project is created, the preset is copied into the project. Editing a preset later never changes projects already running.	Must	v1.0
FR-PRE-06	Stage weights in a project must add up to 100%.	Must	v1.0

Layer	Owned by	Example
Platform presets	Platform Admin	"Duplex", "Bungalow", "Storey building", "Commercial", "Road", "Bridge", "Renovation"
Company presets	Each contractor	A platform preset edited to match how the company builds, saved as "Our standard duplex", optionally with a default payment structure
Project stages	The project	A copy of the chosen preset, adjusted before the client accepts and the plan locks

A worked example (Duplex) is in Appendix A.

7.7 Plan, payment structure, acceptance & lock

The contractor proposes the **plan** — the stages and the payment structure together — and the client must accept it. Once accepted, the plan **locks**. Payment structures are **combinable pieces**, because real contracts mix them (e.g. deposit + milestone payments + retention).

ID	Requirement	Priority	Release
FR-PLN-01	For each stage the contractor sets target start and end dates, the weight, the checklist, the proof requirements and, optionally, the payment attached to it.	Must	v1.0
FR-PLN-02	The payment structure is built from these pieces: Deposit / mobilisation (due before Stage 1 starts); Stage payments (become due when that stage is approved); Change-request payments (for agreed extra work); optional Retention (a % withheld from stage payments and released at final handover).	Must	v1.0
FR-PLN-03	A stage payment can be set to fall due either <i>on approval</i> (default) or <i>before the stage starts</i> (e.g. to buy roofing materials).	Should	v1.0
FR-PLN-04	The contractor's default payment structure (company setting or company preset) is pre-filled on each new project and can be adjusted per project.	Must	v1.0
FR-PLN-05	The contractor sends the plan to the client. The client can Accept or Request changes with comments. The plan goes back and forth until the client accepts.	Must	v1.0
FR-PLN-06	When the client accepts, stages and payment structure lock together and the project becomes Active. Every version of the plan is kept in the project history.	Must	v1.0
FR-PLN-07	After locking, the stages, dates and amounts can only change through a change request (7.8). There are no silent edits.	Must	v1.0
FR-PLN-08	Monthly progress payments and recovery of advance payments (for government and large commercial jobs).	Could	v2

7.8 Change requests

Construction plans change. Change requests make every change to a locked plan visible and agreed by both sides.

ID	Requirement	Priority	Release
FR-CHG-01	Either side can raise a change request against a locked plan: add / remove / reorder stages, change dates, change amounts or weights, add extra work.	Must	v1.0
FR-CHG-02	A change request states what changes, why, and the effect on dates and money. It can carry attachments.	Must	v1.0
FR-CHG-03	The other side approves or rejects it. Approved changes update the plan and create a new plan version; rejected requests are kept on record.	Must	v1.0
FR-CHG-04	Approved extra work can carry a change-request payment that joins the payment schedule.	Must	v1.0

7.9 Progress updates & proof

Proof follows the pattern of Procore's inspections (checklist items with responses, photos, comments and an activity history) adapted to BuildTrack's stages.

ID	Requirement	Priority	Release
FR-PRF-01	Directors, Site Managers, Office Coordinators and assigned Crew Members can post progress updates to a stage and its checklist items.	Must	v1.0
FR-PRF-02	Proof consists of photos, videos and a written description ; voice notes are also supported.	Must	v1.0
FR-PRF-03	Every photo and video captured in the app is automatically stamped with GPS location, date and time and the uploader's name. Media captured outside the project site's area is flagged.	Must	v1.0
FR-PRF-04	A stage cannot be marked "Ready for review" until its minimum proof and checklist are complete.	Must	v1.0
FR-PRF-05	Updates can be captured offline and sync automatically when a connection returns. The capture time and location are those of the original capture, not the sync.	Must	v1.0
FR-PRF-06	Uploaded media is compressed; video length per clip is limited (limit set in the SRD).	Must	v1.0
FR-PRF-07	Every item keeps an activity history: who added what, when, and all comments. Proof cannot be edited or deleted once a stage is submitted.	Must	v1.0
FR-PRF-08	Clients can compare a location or checklist item across dates (before / after).	Should	v1.0

7.10 Tasks & site check-ins

Tasks and check-ins organise crew work and feed the reward system (7.21).

ID	Requirement	Priority	Release
FR-TSK-01	Directors and Site Managers can create tasks on a stage, assign them to one or more Crew Members, and set a due date.	Must	v1.0
FR-TSK-02	Crew Members see today's tasks, mark them done and attach proof. The Site Manager confirms completion.	Must	v1.0
FR-TSK-03	Staff can check in on site with GPS. A check-in only counts when the device is within the project site's area.	Must	v1.0
FR-TSK-04	Site Managers can set scheduled work days per crew member (used for attendance points).	Should	v1.0

7.11 Stage review: approval, rejection & overdue reviews

Stage review is the heart of verified progress. It shows whose turn it is at every step (ball in court).

ID	Requirement	Priority	Release
FR-REV-01	When the Site Manager (or Director) marks a stage Ready for review , the ball moves to the client and the Client Admin and Client Reps with the "Approve / reject stages" module are notified.	Must	v1.0
FR-REV-02	Approve : the stage becomes Approved, counts toward verified progress, and any stage payment falls due (7.13).	Must	v1.0
FR-REV-03	Reject : the reviewer must give a reason by ticking failed checklist items and adding comments, photos or voice notes. Each failed item becomes an issue assigned to the contractor; the stage returns to In progress.	Must	v1.0
FR-REV-04	The contractor fixes the issues, uploads new proof and resubmits. The full history of every round is kept.	Must	v1.0
FR-REV-05	There is no limit on rejections, but on the 3rd rejection of the same stage it is flagged " Repeated rejection " to both sides.	Must	v1.0
FR-REV-06	Either side can raise a stage dispute if they cannot agree (same process as payment disputes, 7.15).	Must	v1.0
FR-REV-07	If the client does not respond, reminders go out on day 1, 3 and 5 after submission (see 7.18 for channels).	Must	v1.0
FR-REV-08	There is no auto-approval . After 7 days the stage shows as "Awaiting client review (overdue)". The contractor may continue to the next stage so work is not blocked.	Must	v1.0
FR-REV-09	An overdue stage does not count toward verified progress until approved, and the waiting time is shown on the project timeline as a client-caused delay.	Must	v1.0
FR-REV-10	Stages past their target end date are automatically flagged as delayed.	Must	v1.0

7.12 Progress calculation

BuildTrack shows two numbers side by side, and never mixes them.

ID	Requirement	Priority	Release
FR-PCT-01	Verified progress = the sum of the weights of approved stages. This is the headline figure.	Must	v1.0
FR-PCT-02	Reported progress = the contractor's own estimate (a rough % per stage), shown separately and clearly labelled.	Must	v1.0
FR-PCT-03	Dashboards also show: stages delayed, stages overdue for review, money paid vs remaining, open issues, and whose turn it is.	Must	v1.0

7.13 Payments (recorded, not processed)

In v1 **money does not move through BuildTrack**. The client pays the contractor by normal bank transfer outside the app; BuildTrack shows what is due, where to pay, and keeps a confirmed, time-stamped record. Paying through the app arrives in v2.

ID	Requirement	Priority	Release
FR-PAY-01	The Director adds the company's bank account (bank, account number). The account name is resolved automatically and must match the verified CAC name (7.2).	Must	v1.0
FR-PAY-02	Each payment in the payment structure has a state: Scheduled → Due → Receipt uploaded → Confirmed , or Disputed / Paid – not confirmed (see Section 8).	Must	v1.0
FR-PAY-03	When a payment falls due (deposit before Stage 1, stage payment on approval, or per its setting), the client sees the amount, currency and the contractor's account details.	Must	v1.0
FR-PAY-04	After paying, the client uploads the receipt and must enter the transaction reference (bank session ID), amount and date .	Must	v1.0
FR-PAY-05	The contractor (Director or Office Coordinator) has 3 days to Confirm or Dispute the receipt. A dispute requires a reason (e.g. money not received, wrong amount).	Must	v1.0
FR-PAY-06	If the contractor does not respond within 3 days, the payment is marked " Paid – not confirmed by contractor ", shown in orange to the client, and flagged to the Platform Admin team for monitoring.	Must	v1.0
FR-PAY-07	The client can withdraw a receipt uploaded by mistake (e.g. paid into the wrong account) before it is confirmed.	Must	v1.0
FR-PAY-08	Retention (if set) is tracked per stage payment and becomes due at final handover.	Should	v1.0
FR-PAY-09	Every payment record — receipts, references, confirmations, disputes — is permanent and cannot be edited or deleted.	Must	v1.0
FR-PAY-10	Pay through the app via a payment provider (e.g. Paystack / Flutterwave), including foreign cards for diaspora clients, with automatic confirmation.	Must	v2
FR-PAY-11	Escrow: client funds held and released on stage approval, through a licensed escrow / trustee partner (legal review required first).	Could	Later

7.14 Payment protection & bank-detail lock

A common fraud is swapping the account number so the client pays the wrong account. These rules protect both sides.

ID	Requirement	Priority	Release
FR-BNK-01	Only the Director can add or change the company bank account.	Must	v1.0
FR-BNK-02	A new account must pass the name-match check against the CAC name.	Must	v1.0
FR-BNK-03	Any change notifies every connected client (push, email and SMS) and pauses payments on the contractor's projects for 24–48 hours (exact period set in the SRD).	Must	v1.0
FR-BNK-04	A bank-detail change triggers re-verification (7.2).	Must	v1.0
FR-BNK-05	Fake receipts from clients are handled by the same process: the contractor disputes, both sides provide evidence.	Must	v1.0

7.15 Disputes (payment and stage)

In v1, **the two parties resolve disputes themselves**; BuildTrack provides the structure, the evidence trail and the consequences. Platform-resolved disputes arrive in v2.

ID	Requirement	Priority	Release
FR-DSP-01	A payment dispute is opened when the contractor disputes a receipt, or by either side about a payment. A stage dispute can be opened by either side about a stage review.	Must	v1.0
FR-DSP-02	Opening a dispute requires a reason. Both sides can add evidence (e.g. the client's debit alert or statement, the contractor's statement for that date, photos). Everything is time-stamped and cannot be edited or deleted.	Must	v1.0
FR-DSP-03	While a dispute is open, the project is paused: no new stages can be submitted and deadlines stop.	Must	v1.0
FR-DSP-04	A payment dispute can end when the contractor confirms the payment or the client withdraws the receipt.	Must	v1.0
FR-DSP-05	Both sides must press "Mark dispute resolved" for the dispute to close and the project to un-pause. Neither side can close it alone.	Must	v1.0
FR-DSP-06	A dispute still open after 14 days is flagged " Unresolved dispute " on the project, on the contractor's profile and on the client's profile .	Must	v1.0
FR-DSP-07	Repeated unresolved disputes or "Paid – not confirmed" records are reviewed by the Platform Admin team and can lead to suspension or loss of verified status.	Must	v1.0
FR-DSP-08	Platform-resolved disputes: the Platform Admin team reviews evidence and makes a ruling.	Must	v2

7.16 Projects without a connected client

Following Procore's model (the project belongs to the contractor's account and the owner is optional), a contractor can run a project with no client on BuildTrack — e.g. its own development, or a client who is not tech-savvy.

ID	Requirement	Priority	Release
FR-NOC-01	A contractor can create and run a project without a connected client. It is labelled "Client not connected" .	Must	v1.0
FR-NOC-02	Without a client, progress is shown as reported only ; nothing can become verified.	Must	v1.0
FR-NOC-03	The contractor can send share links to the client and invite them at any time. When the client joins and accepts the plan, it locks and verified progress begins.	Must	v1.0

7.17 Chat

BuildTrack has its own WhatsApp-style chat, **contained within each contractor company and its clients**. The goal is to keep project conversations on the record, attached to the project, even when staff leave.

ID	Requirement	Priority	Release
FR-CHT-01	Contractor staff can chat with each other (direct and group chats inside the company).	Must	v1.0
FR-CHT-02	Each project has a chat between the client side (Client Admin and Client Reps with the messaging module) and the contractor's staff.	Must	v1.0
FR-CHT-03	Messages support text, photos, videos, documents and voice notes .	Must	v1.0
FR-CHT-04	Comments can also be attached to a specific stage, update, issue, payment or change request, so discussion stays in context.	Must	v1.0
FR-CHT-05	Chat history stays with the project and company. When a user is removed, their messages remain.	Must	v1.0
FR-CHT-06	Read receipts and delivery status; chats work offline and send when a connection returns.	Should	v1.0

7.18 Notifications

Everything appears **in-app**. **Push notifications are the main channel** (free and instant). **Email** is used when someone must act, or when a record is worth keeping. **SMS** is used only for security and final, critical reminders. WhatsApp is not used for notifications.

ID	Requirement	Priority	Release
FR-NTF-01	Notifications are delivered through in-app, push (mobile and browser), email and SMS, following the tables below.	Must	v1.0
FR-NTF-02	Recipients are routed by role and, for Client Reps, by permission module.	Must	v1.0
FR-NTF-03	Users can switch channels on or off per event type, choose a daily digest for progress updates, and set quiet hours at night.	Should	v1.0
FR-NTF-04	Critical notifications cannot be switched off: login codes, new-device logins, bank-detail changes, disputes.	Must	v1.0
FR-NTF-05	Tapping a notification opens the exact item (stage, payment, chat) it refers to.	Must	v1.0

Everyone

- Login codes (OTP) and new-device logins by SMS.
- Critical items (bank changes, disputes, OTPs) cannot be turned off.

7.19 Ratings & reputation

Ratings are the public side of trust and ship in v1.0. They work **both ways**.

ID	Requirement	Priority	Release
FR-RAT-01	When a project is completed, the Client Admin rates the contractor and the Director rates the client (stars + written review).	Must	v1.0
FR-RAT-02	Contractor ratings and reviews appear on the public directory profile. Client ratings are visible to contractors a client invites or connects with.	Must	v1.0
FR-RAT-03	Profiles also show objective records: projects completed, first-time approval rate, and any Unresolved dispute flags.	Should	v1.0
FR-RAT-04	Each side can post one public response to a review.	Could	v1.0
FR-RAT-05	Ratings after a cancellation or contractor switch.	Must	v1.1

7.20 Share links

Share links replace a "viewer" role: read-only access for people who should see progress but not act (family, a lender, auditors, the public).

ID	Requirement	Priority	Release
FR-SHR-01	Authorised users can create a read-only share link for a project, showing progress, stages and approved proof. No account is needed to view it.	Must	v1.0
FR-SHR-02	Share links never show payment details, bank details or chat.	Must	v1.0
FR-SHR-03	Links can be revoked at any time and can optionally expire.	Must	v1.0
FR-SHR-04	A Crew Member can share a viewer link to a project with a fellow crew member who is not assigned to it, so they can help.	Must	v1.0

7.21 Worker reward system

An **optional** feature each contractor can switch on. Employees earn points for verified good work; the contractor turns points into extra pay. It motivates crews to deliver approved work — which feeds the whole trust system.

ID	Requirement	Priority	Release
FR-RWD-01	The Director can switch the reward system on or off for the company.	Must	v1.0
FR-RWD-02	Site Managers, Office Coordinators and Crew Members earn points automatically for the verifiable actions in the table below.	Must	v1.0
FR-RWD-03	The Director sets how points convert to pay: rate (e.g. ₺ per point), bonus levels (e.g. 500 points = a set bonus), or custom (ranking only; the company rewards as it chooses).	Must	v1.0
FR-RWD-04	Points are totalled per period (monthly or per project, chosen by the Director). At period end the Director sees each person's points and bonus owed, and marks bonuses as paid (recorded, not processed).	Must	v1.0
FR-RWD-05	Each employee sees their own points, how they earned them, and what they are worth. Site Managers and the Director see everyone's.	Must	v1.0
FR-RWD-06	An optional company leaderboard can be switched on or off by the Director.	Could	v1.0
FR-RWD-07	Recognition points are capped per giver per period and require a reason.	Must	v1.0

How each role earns points

Role	Earns points for
Crew Member	Tasks completed on time (confirmed by the Site Manager); proof they uploaded that forms part of an approved stage; GPS site check-ins on scheduled days.
Site Manager	Stages approved first time (no rejection); stages finished on or before their target date; fixing rejected issues quickly.
Office Coordinator	Confirming receipts within the 3-day deadline; replying to client messages promptly; keeping project documents complete.
All three	Recognition points (capped per period, reason required): the Site Manager can award Crew Members; the Director can award anyone.

Design principles

- Points come only from actions the app can **verify**. Uploading many photos earns nothing; approved work does.
- There are **no negative points**. Poor work already shows through rejections.
- The **Director does not earn points** — they fund the rewards.
- Points are **internal to the contractor**. Clients never see them.

7.22 Subscriptions & billing

Contractors pay; individual clients are always free. Actual prices are set in the business phase; this section defines the model.

ID	Requirement	Priority	Release
FR-BIL-01	Contractor pricing uses a hybrid model : tiers that each include a set number of active projects, plus a flat fee for each extra active project above the tier's allowance.	Must	v1.0
FR-BIL-02	Unlimited users on every tier.	Must	v1.0
FR-BIL-03	Only active (in-progress) projects count. Completed and archived projects never count toward the allowance and stay viewable.	Must	v1.0
FR-BIL-04	Free tier : a contractor's first project is free until it is finished, up to 12 months . Any further project requires a paid plan.	Must	v1.0
FR-BIL-05	Monthly and yearly billing, with a discount for yearly.	Should	v1.0
FR-BIL-06	Billing is in naira. When a contractor regularly exceeds its allowance, the app suggests the tier that would be cheaper.	Should	v1.0
FR-BIL-07	If a subscription lapses, active projects become read-only for the contractor (clients keep full view of their records) until payment is made.	Should	v1.0
FR-BIL-08	Organisation clients are free under Early Access in v1, limited to a small number of active projects (e.g. 3; final number set in the business phase). The Early Access label is shown from day one.	Must	v1.0
FR-BIL-09	Paid organisation plan with portfolio dashboard and audit reports. Early Access organisations receive founding-member perks (e.g. existing projects stay free, or a founding discount) and at least 1–2 months' notice before charging starts.	Must	v2
FR-BIL-10	Paid client add-ons such as independent site inspections.	Could	Later

7.23 Platform Admin dashboard

The internal dashboard for BuildTrack's own team (BuildTrack Support).

ID	Requirement	Priority	Release
FR-ADM-01	Verification queue : review contractor submissions, see automated check results, approve / reject with reasons, manage badges and re-verification.	Must	v1.0
FR-ADM-02	User support : find accounts and projects, view history, handle support tickets, suspend or reinstate accounts.	Must	v1.0
FR-ADM-03	Dispute & risk monitoring : see open and unresolved disputes, "Paid – not confirmed" records, repeated-rejection flags and bank-detail changes; act on repeat offenders.	Must	v1.0
FR-ADM-04	Subscriptions : plans, free-project tracking, billing status, Early Access organisations.	Must	v1.0

ID	Requirement	Priority	Release
FR-ADM-05	Stage preset library: create and maintain platform presets for all project types.	Must	v1.0
FR-ADM-06	All admin actions are logged in an audit trail.	Must	v1.0
FR-ADM-07	Dispute rulings (platform-resolved disputes).	Must	v2

7.24 Pause, cancel & switch contractor

Handles projects that stop, end early, or change contractor mid-build.

ID	Requirement	Priority	Release
FR-LIF-01	Pause: either side requests a pause with a reason (funds, weather, permits); the other side accepts. While paused, no deadlines or overdue flags run.	Must	v1.1
FR-LIF-02	Cancel: requires both sides to agree, or goes through a dispute. The project becomes read-only and archived; stages, proof, payments and chat are all kept.	Must	v1.1
FR-LIF-03	Switch contractor: the old project is closed and archived (both sides keep access to their records). The client creates a handover: a new contractor is invited to a new project that starts from the last approved stage.	Must	v1.1
FR-LIF-04	The new contractor sees the approved history (stages and proof) but not the previous contractor's chats or payment details.	Must	v1.1
FR-LIF-05	Both sides can rate each other after a cancellation or switch.	Must	v1.1

7.25 Expenses & materials log

Follows industry practice (e.g. Buildertrend): what the client sees depends on the contract type.

ID	Requirement	Priority	Release
FR-EXP-01	When creating a project the contractor chooses the contract type: Fixed price or Open book .	Must	v1.1
FR-EXP-02	Fixed price: the contractor can record expenses (materials, labour, equipment, receipts) for its own use; they are internal and the client sees only payments.	Must	v1.1
FR-EXP-03	Open book: expenses and receipts are shared with the client.	Must	v1.1
FR-EXP-04	Materials log (both contract types): when the client supplies materials directly (e.g. cement, blocks), deliveries and usage are logged against what the client bought, visible to both sides.	Must	v1.1

8 Key lifecycles & user flows

8.1 End-to-end flow

8.2 Contractor onboarding

1. Director signs up (phone + email OTP) and creates the company profile.
2. Submits CAC, TIN, director ID + selfie, bank account, office address proof; optional badges.
3. Automated checks run (CAC status, TIN, identity, bank-name match); Platform Admin reviews the rest.
4. Verified → company appears in the directory and can create live projects. Rejected → reasons shown, resubmit.
5. Director invites staff and sets up company presets and default payment structure.

8.3 Project states

State	Meaning	Release
Draft	Contractor is setting up the project and plan.	v1.0
Awaiting client acceptance	Plan sent; client can accept or request changes.	v1.0
Client not connected	Running without a client on BuildTrack; reported progress only.	v1.0
Active	Plan locked; work, reviews and payments in progress.	v1.0
On hold — dispute	Automatically paused while a payment or stage dispute is open.	v1.0
Completed	All stages approved and final payments settled; read-only; ratings open.	v1.0
Paused (by agreement)	Paused on request, accepted by the other side; no deadlines run.	v1.1
Cancelled / archived	Ended early; read-only record kept; optional handover to a new contractor.	v1.1

8.4 Stage lifecycle

State / flag	Rule
Rejected → In progress	Failed checklist items become issues; contractor fixes and resubmits; history kept.
Repeated rejection (flag)	Raised on the 3rd rejection of the same stage, visible to both sides.
Awaiting client review (overdue)	After 7 days without a decision; reminders on days 1, 3 and 5; contractor may continue; not counted as verified.
Delayed (flag)	Stage is past its target end date.
Disputed	A stage dispute is open; the project is on hold until both sides mark it resolved.

8.5 Payment lifecycle

Alternative outcome	Rule
Paid – not confirmed by contractor	No response within 3 days (day-2 reminder by push, email, SMS). Shown in orange to the client; flagged to Platform Admin.
Disputed	Contractor disputes with a reason; project goes on hold; dispute process applies.
Withdrawn	Client withdraws a receipt uploaded by mistake before confirmation; payment returns to Due.
Payments paused	For 24–48 hours after a contractor bank-detail change; clients are alerted.

8.6 Dispute lifecycle (v1)

If still open after **14 days**: flagged **"Unresolved dispute"** on the project and on both the contractor's and the client's profiles. Repeat cases are reviewed by the Platform Admin team. From v2, the Platform Admin team can rule on disputes.

9 Business model

Contractors pay a subscription; individual clients are always free; organisation clients are free under Early Access in v1 and paid from v2.

Who	Pays?	Details
Contractors	Yes — main revenue	Hybrid tiers (included active projects + fee per extra project), unlimited users, monthly or yearly. First project free until finished, up to 12 months.
Individual clients	Free, always	Free clients bring contractors onto the platform: every client who invites a contractor brings in a paying company.
Organisation clients	Free in v1 (Early Access); paid from v2	Labelled Early Access from day one, limited active projects. v2 paid plan adds portfolio dashboard and audit reports; founding-member perks and advance notice for early users.
Client add-ons	Later	E.g. independent site inspection by a BuildTrack-vetted inspector.

9.1 Why this model

- **Industry standard:** Procore and Buildertrend charge the contractor and let clients join free; unlimited users drives adoption.
- **Value to contractors:** the app runs their projects and wins them clients (verified badge, ratings, "track your build live").
- **Fairness:** charging by active projects matches usage; the per-project overage removes the "tier jump" problem.
- **Avoided:** per-seat pricing (discourages adding crew, who supply the proof) and percentage-of-contract-value pricing (strongly disliked by Procore users).

Prices are not set

Actual naira prices, tier allowances, the extra-project fee, the yearly discount and the Early Access project cap will be decided in the business phase, informed by interviews with Nigerian contractors and the running-cost estimate from the SRD (hosting, media storage, SMS, verification checks).

10 Non-functional requirements

Area	ID	Requirement
Platforms	NFR-PLT-01	Web app and mobile apps (Android and iOS) for both the client and contractor sides.
	NFR-PLT-02	The mobile app must run well on low-cost Android phones common among site staff.
	NFR-PLT-03	Web app is responsive and supports browser push notifications.
Offline & network	NFR-OFF-01	Crew and site staff can capture proof, complete tasks, check in and write chat messages offline; everything syncs automatically, preserving original capture time and GPS.
	NFR-OFF-02	The app remains usable on slow 3G connections; uploads resume after interruption.
	NFR-OFF-03	Images and videos are compressed before upload to save data and storage.
Security	NFR-SEC-01	All data encrypted in transit and at rest.
	NFR-SEC-02	Role-based access enforced on every request, matching Section 5.
	NFR-SEC-03	OTP verification at sign-up and on new devices.
	NFR-SEC-04	Proof, plan versions, payment records, disputes and ratings are immutable once submitted, with a full audit trail.
	NFR-SEC-05	Bank-detail changes follow the lock rules in 7.14.
Privacy	NFR-PRV-01	Comply with Nigeria's data protection law (NDPA 2023), including consent, data minimisation and user rights.
	NFR-PRV-02	Store identity verification results, not raw NIN / passport numbers.
	NFR-PRV-03	Share links never expose payment, bank or chat data.
Data retention	NFR-RET-01	Project records are never deleted; completed and cancelled projects stay viewable by both sides.
	NFR-RET-02	When a user leaves or deletes their account, their personal data is removed or anonymised as the law requires, while the project record they contributed to remains.
Reliability	NFR-REL-01	High availability for the core service; targets defined in the SRD.
	NFR-REL-02	Notification delivery with retry and fallback (push → email → SMS for critical items).
Usability	NFR-USE-01	Crew screens use large buttons, minimal typing, photo and voice first.
	NFR-USE-02	Plain language throughout; construction terms familiar in Nigeria (DPC, lintel, decking).
	NFR-USE-03	Times shown in each user's local time zone (diaspora clients).
Localisation	NFR-LOC-01	English in v1; naira by default with USD / GBP labels; Nigerian formats for phone numbers and addresses.
Scalability	NFR-SCL-01	Media storage and delivery designed to grow with projects; video limits and compression keep costs predictable.

11 Integrations & third-party services

Final provider choices are made in the SRD. Candidates identified during ideation:

Need	Candidate providers	Used for
Business verification	Dojah, Prembly, VerifyMe, Seamfix	CAC lookup (name, RC number, status), TIN check
Identity verification	Smile ID, Prembly, Dojah	NIN / passport + selfie liveness for directors and Client Admins
Bank account name lookup	Paystack, Flutterwave	Match account name to CAC name
Subscription billing	Paystack, Flutterwave	Charging contractors in naira
Push notifications	Firebase Cloud Messaging, Apple Push, Web Push	Main notification channel
Email	A transactional email service	Action and record notifications
SMS	A Nigerian SMS provider (e.g. Termii)	OTPs and critical alerts
Maps & location	A maps / geocoding provider	Project site pin, site area, GPS checks
Media storage	Cloud object storage + CDN	Photos, videos, voice notes, documents
In-app payments v2	Paystack, Flutterwave	Pay through the app, foreign cards
Escrow Later	Licensed escrow / trustee partner	Holding funds until stage approval (legal review first)

12 Release plan

Release	Scope
v1.0 First launch	- Accounts, OTP, contractor verification + badges, client NIN / passport verification - All roles: Client Admin, Client Reps with modules; Director, Site Manager, Office Coordinator, Crew Member; Platform Admin - Contractor directory, invitations (including contractors not yet on BuildTrack) - Projects, stage presets for all project types (incl. roads and bridges), company presets - Plan + payment structure proposal, client acceptance, lock, change requests - Projects without a connected client - Proof (photo, video, description, GPS/time), minimum proof, offline capture - Tasks and GPS site check-ins - Stage review: approve, reject → issues, repeated rejection flag, reminders, overdue at 7 days - Verified vs reported progress - Recorded payments, 3-day confirmation, payment protection, bank-detail lock - Payment and stage disputes (resolved by the parties), 14-day unresolved flag on both profiles - Built-in chat; notifications (in-app, push, email, SMS) - Two-way ratings at project completion - Share links and crew viewer links - Optional worker reward system - Contractor billing (hybrid tiers, first project free ≤ 12 months); organisation Early Access - Web + mobile apps for both sides; Platform Admin dashboard
v1.1 Soon after	- Pause, cancel, switch contractor with handover; ratings after cancellation - Contract type (fixed price / open book), expenses, materials log
v2	- Pay through the app (Paystack / Flutterwave) - Platform-resolved disputes - Paid organisation plan, portfolio dashboard, audit reports - Multiple contractors per project with scopes - Monthly progress payments, advance recovery - Extra roles: subcontractor, finance / accountant, consultant (architect, QS, engineer)
Later	- Escrow via a licensed partner - Paid client add-ons (independent site inspections) - Camera and drone integrations; AI checks on proof photos

13 Risks & mitigations

Risk	Impact	Mitigation
Contractors don't adopt (cost, habit, fear of transparency)	High	First project free; clear value (wins diaspora clients, verified badge); simple crew app; unlimited users.
Clients don't join or don't review stages	High	Individual clients free; reminders on days 1/3/5; overdue after 7 days so work isn't blocked; delays attributed on the timeline.
Fake or recycled proof (old photos)	High	In-app capture stamped with GPS and time; off-site media flagged; client review; ratings. Gallery-upload policy to be confirmed (Section 14).
Contractor denies receiving payment	High	3-day confirm deadline; transaction reference; "Paid – not confirmed" status; disputes; profile flags; admin monitoring. Solved fully by in-app payments (v2).
Account-swap fraud	High	Bank name must match CAC; Director-only changes; client alerts by push/email/SMS; 24–48h payment pause; re-verification.
Disputes stall projects (parties resolve alone in v1)	Medium	Both-sides resolve rule; 14-day public flag on both profiles; admin review of repeat cases; platform rulings in v2.
Clients escape bad reputations with new accounts	Medium	One verified NIN / passport per Client Admin account.
Verification is slow or costly	Medium	Automated checks where APIs exist; admin review only for the rest; verification cost built into pricing.
Media storage and SMS costs grow	Medium	Compression and video limits; push as main channel; SMS only for critical items.
Reward system gamed	Medium	Points only from verified actions; capped recognition with reasons; no points for raw upload volume.
v1.0 scope is large for a solo builder	Medium	Clear v1.0 / v1.1 split; SRD to sequence build order; reuse proven services for verification, messaging and billing.
Data protection non-compliance	Medium	NDPA-aligned design; store verification results only; privacy review before launch.
Name / trademark conflict	Low	Final name chosen with domain, CAC and trademark checks before launch.

14 Assumptions, dependencies & open items

14.1 Assumptions

- Contractors and clients have smartphones; crew phones may be low-end Android with intermittent data.
- Payments continue to be made by bank transfer outside the app in v1.
- Nigerian verification providers (CAC, TIN, NIN, bank-name lookup) remain available via API.
- Launch market is Nigeria, with diaspora clients abroad.

14.2 Dependencies

- Contracts with verification, SMS, email, push, maps, storage and billing providers (Section 11).
- App store accounts (Google Play, Apple App Store).
- A platform stage preset library written for every supported project type before launch.
- Legal review of terms of service, privacy policy (NDPA) and, later, escrow.

14.3 Open items

#	Item	Status / next step
1	Final product name	Parked; BuildTrack is the working name. Check domain, CAC and trademarks before launch.
2	Subscription prices, tier allowances, extra-project fee, yearly discount	Business phase, after contractor interviews and SRD cost estimate.
3	Organisation Early Access active-project cap	Business phase (3 suggested).
4	Contractor role defaults where ideation was silent (Section 5.3)	Confirm before SRD.
5	Exact payment pause after bank-detail change (24–48 h)	Decide in SRD.
6	Video length / media limits per upload	Decide in SRD with storage cost estimate.
7	Whether gallery (non-camera) uploads can count as proof, or are labelled "not captured in app"	Confirm before SRD.
8	Reward system caps (recognition points per period) and default period	Confirm before SRD.
9	Final list of platform stage presets and their checklists	Build during development, reviewed by a construction professional.
10	Escrow legal and licensing requirements	Nigerian fintech lawyer review before any escrow work.

A Appendix A — Example stage preset: Duplex

Illustrative platform preset. Contractors can edit it into a company preset; weights must total 100%.

#	Stage	Weight	Example checklist items
1	Site clearing & setting out	3%	Site cleared; building lines set out; setting-out checked against drawings
2	Foundation / substructure	12%	Trenches dug to depth; reinforcement placed; concrete poured; foundation blockwork
3	DPC (damp-proof course)	5%	Filling and compaction; DPC membrane laid; oversite concrete
4	Blockwork to lintel level	10%	Ground-floor walls raised to lintel; openings to drawing sizes
5	Lintel, beams & first-floor decking	12%	Lintels and beams cast; decking formwork and reinforcement; slab cast and cured
6	Upper-floor blockwork	8%	First-floor walls raised; lintels; parapets if any
7	Roofing	10%	Roof trusses fixed; covering installed; fascia and gutters
8	Electrical & plumbing (first fix)	8%	Conduits and boxes; pipework routed; pressure test
9	Plastering / rendering	8%	Internal plaster; external render; surfaces level
10	Windows & doors	6%	Frames fixed; windows and doors installed and working
11	Screeding & tiling	7%	Floors screeded; tiles laid; wall tiling in wet areas
12	Painting & finishing	7%	Surfaces prepared; paint coats applied; fittings installed
13	Final fixes & handover	4%	Snag list cleared; systems tested; keys and documents handed over
Total		100%	

Example proof rule per stage: at least 5 photos and 1 video captured in the app on site, GPS- and time-stamped, plus a short description, with every checklist item marked done before "Ready for review".

B Appendix B — Decision log

Key decisions taken during the ideation phase, for traceability.

Topic	Decision
Product family	Standalone app under the All Tracker umbrella (not a shared generic engine).
Two sides	Client (individuals, governments, organisations) and Contractor.
Role names	Client Admin, Client Rep; Director, Site Manager, Office Coordinator, Crew Member; Platform Admin.
Client Reps	Unlimited, created by the Client Admin; abilities via permission modules; all modules ≈ admin.
Viewer role	None — read-only share links instead.
Contractor roles	Fixed; Director cannot customise. Crew see only assigned projects, own login, can share viewer links.
Who creates projects	The contractor. Clients browse verified contractors and invite them, including contractors not yet on BuildTrack.
Verification	Only verified contractors can use the app; required checks + optional badges; COREN required for roads and bridges; yearly re-verification.
Client identity	NIN, or international passport; prevents reputation-escaping accounts.
Contractors per project	One in v1; several in v2.
Presets	Stage presets for all project types including roads and bridges; three layers.
Plan	Contractor proposes stages + combinable payment structure; client accepts; plan locks; change requests afterwards; company default payment structure.
Proof	Checklist items + photos, videos, description; GPS/time stamps; minimum proof before review.
Progress	% complete from approved stages only.
Rejection	Reason required; issues; resubmit; 3rd rejection flagged; stage disputes allowed.
No response	Reminders days 1/3/5; no auto-approval; overdue at 7 days; contractor can continue.
Payments	Recorded, not processed, in v1; client sees account, pays outside, uploads receipt + reference; contractor confirms within 3 days. Pay in app in v2.
Disputes	Parties resolve in v1; project on hold; both must mark resolved; 14-day flag on both profiles; platform rulings in v2.
Bank details	Name must match CAC; Director only; clients alerted; payments paused 24–48 h.
Projects without client	Allowed; reported progress only until the client joins.
Chat	Built in, WhatsApp-style, contained within each company and its clients; v1.0.
Notifications	Push first; email for action/record; SMS for critical only; no WhatsApp.
Ratings	Two-way, v1.0.
Rewards	Optional, v1.0; Site Manager, Office Coordinator and Crew earn points from verified actions; company sets conversion.

Topic	Decision
Expenses	Fixed price (internal) vs open book (shared) + materials log; v1.1.
Currency	Per-project label: naira default, USD, GBP; no conversion.
Who pays	Contractors; individual clients always free; organisations Early Access in v1, paid in v2.
Pricing model	Hybrid tiers by active projects + extra-project fee; unlimited users; first project free up to 12 months; prices deferred.
Platforms	Web and mobile for both sides; offline capture for site staff.
Releases	v1.0 / v1.1 / v2 / Later as in Section 12.
